# Rotosark

The missing weeding machine

**OLIVER AGRO S.R.L.**  
 Via Torre, 350 - 37056  
 ENGAZZA' DI SALIZZOLE (VERONA) - ITALY  
 Tel. +39 045 6954392 - Fax. +39 045 6954408  
[info@dittaoliver.com](mailto:info@dittaoliver.com) - [www.oliveragro.com](http://www.oliveragro.com)

# Rotosark SPECIFICHE

It is not a common weeder because it incorporates 3 machines in one:

- mechanical weeder
- aerating machine
- filling machine

Thanks to the **Rotoblizz / Rotovert / Colibri** applications, we act directly on the transplant row, without damaging the root and foliar system, uprooting weeds thus reducing the need for chemical herbicides.

## Advantages:

- Decreases the application of chemical herbicides;;
- Air the ground improving its absorption not only of rain, but also of nighttime humidity.
- Air the ground

## Original and unique:

- Reliable, for precision and durability;
- Multi-purpose, as it incorporates 3 machines in one;
- Revolutionary, as it operates between plants and between rows;
- Flexible, because easily adjustable with just one tool;

- Singular, inimitable, with an international patent;
- Practice, because it is easy to use;
- Customizable for all types of soil and cultivation;
- Economic because it reduces working time and contains the costs of weeding

# Rotosark APPLICATIONS

## Application Rotoblizz

- N°2 opposed **Rotors**, with curved blades;
- Inclined **28°** in the direction of the plant;
- Penetrate up to **4 cm** in the soil, eliminating the germination of weeds;
- We can work **7 days** after transplantation and **10 days** from planting.

**Suitable for:**  
all crops transplanted and **seeded in line** and on **ridge**.

## Application Rotovert

- N°2 opposing **Rotors**, with curved blades;
- Disposti verticalmente in direzione della pianta;
- Penetrate up to **3/4 cm** in the ground, eliminating the germination of weeds;
- We can work **7 days** after transplantation and **10 days** from transplanting.

**Suitable for:**  
for some crops transplanted and seeded in row and on on ridge (salad, celery, leek, onions, carrots, radicchio).

## Application Colibri

- Made up of packs of toothed disk:
- A)** Teeth inclined in the opposite direction to the plant, protect the plant by compressing the soil outwards.
- B)** Sawtooth tilted teeth, arranged in the spaces not occupied by the seedlings, they perform the cleaning of the weeds. The teeth penetrate **2/3 cm** into the ground, preserving the collar of the plant; We can work **10 days** from planting.

**Suitable for:**  
carrots, radishes, parsley, sown rice, basil, rocket, etc

**Rotoblizz**

Work on all crops with inter-row distance equal or greater than **30 cm**.

ø26 cm row	(L) from 32
ø30 cm row	(L) from 35
ø35 cm row	(L) from 40
ø40 cm row	(L) from 50
ø45 cm row	(L) from 60
ø50 cm row	(L) from 100

**Rotovert**

Works on all crops with inter-row distance from **15 to 35 cm**

ø40 inter row (L) from 15 to 35

**Colibri**

works on all crops in narrow rows with inter-row distance of **double files. (L1)** from **5 to 35 cm**.

Combination of disk groups developed according to the size of the planting pattern provided by the client.

## FRAME

**Fixed frame** ●●●●  
Including third-point attack.

Frame width in cm: **240 / 255 / 300 / 450 / 520**

**Mobile framewith hydraulic translator** ●●●●  
Including third-point coupling, it is equipped with two opposing hydraulic pistons, which move the frame to the right or left, aligning with precision on the inter-rows.

Frame width **L** in cm: **240 / 255 / 300 / 450 / 520**

**Folding frame** ●  
Including third-point attachment, with closed frame, allows road circulation.  
Closed frame on **L** the **cm: 240**  
Open frame **L** on **cm: from 400 to 500**

Kit dedicated: **dedicated plate and lights, hydraulic guide, steering wheels** (with Ø400x100 ridge).

**Closed metallic structure** ●  
For the rear rollers that flatten the ground

Frame width **L** on **cm: 240**

## BASIC ELEMENT

### Single element ●●

Used for one or more rows, consisting of:  
**25)** Parallelogram with springs pre-set variable load (A), with adjustment by means of a handle. Free variable load (B), with crank adjustment.  
**26)** Structure elements carrier supports base set-up and options.  
**27)** Hoes of varying sizes.  
**28)** Ridger

### Single element ●

Used for one or more twin rows, flexible, fully adjustable with a single register key.

**25)** Without extension

**26)** With extension

### Parallelogram right left ●

Combined element Only two parallelograms on the sides mount a series of bars, which allow a wider layout of the Rotovert application. **Rotovert**

The two parallelograms (A) ensure a homogeneous compression on all the assembled components, thanks to a system of springs (B) which, arranged in different positions, increase or decrease the compression on the ground

### C) Elements holder structure ●

Supports basic equipment and options.

### D) Group of ploughshares ●

Of different sizes, the ploughshares work the land in the row, where the rotors do not reach. The dimensions of the ploughshares are related to the distance of the plants between the inter-rows.

### E) Ridger ●

Reinforces the plants, covering them at the base of the soil.

## DRIVING

### Fixed driving ●●●●

Height adjustable support wheels applicable on various frames it maintains the alignment of the machine

### Mobile driving ●●●●

Manual guide, seat for the operator, crested wheels of various sizes.

### Hydraulic driving ●●●●

Hydraulic driven, seat for the operator, crested wheels of various sizes.

## WHEELS

### Wheels with ridge ●●●●

Directional wheels adjustable in height  
Diameter of wheels from:  
Ø 320 / 360 / 400 x 100

### Rubber wheels ●●●●

Applicable on a hydraulic movement frame, they have the function of stabilizing the machine, facilitating the telescopic movement of the frame. Diameters rotate from: Ø 364 x 151

### Smooth wheels ●●●●

Applicable on a hydraulic movement frame, they have the function of stabilizing the machine with a more precise attitude. Flows sideways, facilitating the telescopic movement of the frame. Diametri ruota: Ø 300 x 100
